## EMPLOYMENT

---

### Research Associate

July 2024 - now

University of Oxford

Department of Computer Science

Host: Dr. Ján Pich

## EDUCATION

---

### Ph.D. in Computer Science

2020 - 2024

University of Warwick

Department of Computer Science

Advisor: Igor Carboni Oliveira

Thesis: *Complexity Theory of Classical and Quantum Computational Devices*

### M.Sc. in Computer Science

2018 - 2020

University of Sao Paulo

Institute of Mathematics and Statistics (IME-USP)

Advisor: Yoshiharu Kohayakawa

Thesis: *Sunflower theorems in monotone circuit complexity*

### B.Sc. in Computer Science (with honours)

2014 - 2017

University of Sao Paulo (IME-USP)

Average: 9.1/10

Ranked 1st among 37 Computer Science students

Advisor: Yoshiharu Kohayakawa

Thesis: *Ramsey-type problems in orientations of graphs*

## FUNDING, DISTINCTIONS AND AWARDS

---

**Best Master Thesis Award:** Winner of the Latin American Master Thesis Contest (CLTM - XXVII) at the Latin American Computing Conference (CLEI 2021). 2021

**Best Master Thesis Award:** Winner of the Contest of Theses and Dissertations (CTD - XXXIV) at the Congress of the Brazilian Computer Society (CSBC 2021). 2021

**Alejandro López-Ortiz Best Paper Award:** For the paper *Monotone Circuit Lower Bounds from Robust Sunflowers* at the LATIN 2020 conference, joint work with Benjamin Rossman and Mrinal Kumar. 2021

**Chancellor's International Scholarship:** Awarded to the 30 most outstanding international PhD applicants to the University of Warwick. 2020

**Computational Complexity and extremal combinatorics** September 2018 - August 2020  
FAPESP Grant for M.Sc. research

**Computational Complexity and extremal combinatorics** January 2019 - July 2019  
FAPESP Grant for research internship abroad (University of Toronto)

**Best student award of IME-USP:** Awarded to the best student among all students graduating at IME-USP in a given year, including all majors in Mathematics, Applied Mathematics, Statistics and Computer Science. 2017

**Second place**, in the admission exam of the University of Sao Paulo for undergraduate studies in Computer Science (over 3,500 applicants). 2014

## PUBLICATIONS

- 
9. **A Meta-Complexity Characterisation of Quantum Cryptography** 2024  
 Bruno P. Cavalar, Eli Goldin, Matthew Gray, Peter Hall  
 Proc. **EUROCRYPT**, 2025  
*Available at* <https://arxiv.org/abs/2410.04984>  
*Brief description:* Obtains the first complexity-theoretic characterisation of a quantum cryptographic task, pioneering connections between quantum cryptography and Kolmogorov complexity.
  8. **Boolean Circuit Complexity and Two-Dimensional Cover Problems** 2024  
 Bruno P. Cavalar, Igor C. Oliveira  
 ACM Transactions on Computation Theory (ACM **ToCT**) 2025  
*Available at* <https://dl.acm.org/doi/10.1145/3718746>  
*Brief description:* Reduces the problem of showing circuit lower bounds to a cleaner combinatorial problem, offering a new approach to a problem that has seen very little progress in decades.
  7. **On the Computational Hardness of Quantum One-wayness** 2023  
 Bruno P. Cavalar, Eli Goldin, Matthew Gray, Peter Hall, Yanyi Liu, Angelos Pelecanos  
 Accepted to **Quantum Journal** (To Appear)  
*Available at* <https://arxiv.org/abs/2312.08363>  
*Brief description:* Shows that complexity-theoretic separations are necessary for quantum one-wayness (an important cryptographic task) to be possible. Also proves that pseudorandom states imply one-way state generators in nearly all parameter regimes.
  6. **Constant-Depth Circuits vs. Monotone Circuits** 2023  
 Bruno P. Cavalar, Igor Carboni Oliveira  
 Proc. 38th Computational Complexity Conference (**CCC**), LIPIcs, Vol. 264, 29:1–29:37  
*Available at* <https://arxiv.org/abs/2305.06821>  
*Brief description:* Proves the first separation between constant-depth circuit classes and monotone circuits, nearly solving an important open problem of 1990. Shows a dichotomy for the monotone complexity of CSPs, implying limitations for communication complexity methods.
  5. **Algorithms and Lower Bounds for Comparator Circuits from Shrinkage** 2022  
 Bruno P. Cavalar, Zhenjian Lu  
 Proc. 13th Innovations in Theoretical Computer Science Conference (**ITCS**), LIPIcs, Vol. 215, 34:1–34:21  
**Algorithmica**, 85(7):2131–2155, 2023  
*Available at* <https://arxiv.org/abs/2111.14974>  
*Brief description:* Obtains superlinear average-case lower bounds for the strongest circuit classes ever studied, and derives the first algorithms analysing comparator circuits, such as satisfiability algorithms.
  4. **Directed graphs with lower orientation Ramsey thresholds** 2021  
 Gabriel Ferreira Barros, Bruno P. Cavalar, Yoshiharu Kohayakawa,  
 Guilherme Oliveira Mota, Tássio Naia  
 Extended Abstracts **EuroComb**, Trends in Mathematics, Vol. 14, 799–804  
**RAIRO-Oper. Res.** 58 (2024) 3607–3619  
*Available at* <https://arxiv.org/abs/2211.07033>  
*Brief description:* Constructs graphs for which the probability threshold of their directed Ramsey property is lower than the generic upper bound. Contains part of my undergraduate thesis.

3. **Orientation Ramsey thresholds for cycles and cliques** 2021  
 Gabriel Ferreira Barros, Bruno P. Cavalar, Yoshiharu Kohayakawa, Tássio Naia  
 SIAM Journal on Discrete Mathematics (**SIDMA**), 35(4):2844–2857, 2021  
 Available at <https://arxiv.org/abs/2012.08632>  
*Brief description:* Initiates the problem of determining the threshold function for the directed Ramsey property in random graphs. Determines the corresponding threshold for cycles and cliques.
2. **Monotone circuit lower bounds from robust sunflowers** 2020  
 Bruno P. Cavalar, Mrinal Kumar, Benjamin Rossman  
 Proc. 14th Latin American Theoretical Informatics Symposium (**LATIN**),  
 LNCS Vol. 12118, 311–322  
 Winner of the *Alejandro López-Ortiz Best Paper Award* at LATIN  
**Algorithmica**, 84(12):3655–3685, 2022  
 Available at <https://arxiv.org/abs/2012.03883>  
*Brief description:* Obtains the strongest monotone circuit lower bound to-date, improving a 30-year old record, and a tight monotone circuit lower bound for large cliques.
1. **Anti-Ramsey threshold of cycles** 2019  
 Gabriel Ferreira Barros, Bruno P. Cavalar, Guilherme Oliveira Mota, Olaf Parczyk  
 Proc. 10th Latin American Algorithms, Graphs and Optimization Symposium (**LAGOS**) 2019,  
 ENTCS Vol. 346, 89–98  
 Discrete Applied Mathematics (**DAM**), 323:228–235, 2022  
 Available at <https://arxiv.org/abs/2006.02079>  
*Brief description:* Settles the problem of determining the threshold function for the anti-Ramsey property of cycles in random graphs, whereas previous works only addressed large cycles.

## ACADEMIC VISITS

---

<b>Lund University and University of Copenhagen</b> Visiting Graduate Student <i>Host:</i> Susanna Rezende	<i>October 2023</i>
<b>École Polytechnique Fédérale de Lausanne (EPFL)</b> Visiting Graduate Student <i>Host:</i> Mika Göös	<i>May 2023 - June 2023</i>
<b>Simons Institute for the Theory of Computing (UC Berkeley)</b> Visiting Graduate Student <i>Program:</i> <b>Meta-Complexity</b>	<i>Jan 2023 - March 2023</i>
<b>University of Toronto</b> International Visiting Graduate Student (IVGS) <i>Host:</i> Benjamin Rossman	<i>Jan 2019 - Jul 2019</i>

## TEACHING ACTIVITIES

---

### University of Warwick

- *Discrete Mathematics and its Applications 1* 2022  
 Marking and teaching of seminars ( $\sim 10$  students).  
 1st year course for Discrete Mathematics undergraduates.
- *Quantum Computing* 2021, 2022  
 Marking and teaching of seminars ( $\sim 40$  students).  
 Undergraduate and graduate students of Computer Science.

- *Computational Learning Theory* 2021  
Marking and teaching of seminars (~ 20 students).  
Undergraduate and graduate students of Computer Science.
- *Algorithms* 2020  
Teaching of seminars (~ 40 students).  
2nd year course for Computer Science undergraduates.

### University of São Paulo

- *Introduction to Graph Theory* 2020  
Marking and teaching of seminars (~ 20 students).  
Undergraduate/graduate course.
- *Foundations of Data Science* 2019  
Marking and teaching of seminars (~ 20 students).  
Undergraduate/graduate course.
- *Combinatorial Optimization* 2018  
Marking and teaching of seminars (~ 20 students).  
Undergraduate course.
- *Languages, Automata and Computability* 2018  
Marking and teaching of seminars (~ 80 students).  
Graduate course.
- *Introduction to Computer Science* 2015  
Marking and teaching of seminars (~ 40 students).  
1st year undergraduate course.
- *Mathematical Foundations for Computer Science* 2015  
Marking and teaching of seminars (~ 60 students).  
1st year undergraduate course.

## SELECTED TALKS AND SEMINARS

---

### Boolean Circuit Complexity and Two-Dimensional Cover Problems

- Seminar on Theory of Computing (Seminář z teoretické informatiky), Charles University* 2025
- LIMDA Seminar (Universitat Politècnica de Catalunya, UPC)* 2025

### A Meta-Complexity Characterization of Quantum Cryptography

- EUROCRYPT (Madrid, Spain)* 2025
- Quantinuum (London Office)* 2025
- Complexity Network UK (Imperial College London)* 2024

### Constant-depth Circuits vs. Monotone Circuits

- MIAO Seminar (University of Copenhagen)* 2023
- EPFL Theory Coffee Seminar (EPFL)* 2023
- Computational Complexity Conference (CCC)* 2023
- 39th British Colloquium for Theoretical Computer Science (BCTCS)* 2023
- Simons Institute for the Theory of Computing* 2023
- Complexity Network UK (Imperial College London)* 2022

## Algorithms and Lower Bounds for Comparator Circuits from Shrinkage

*13th Innovations in Theoretical Computer Science (ITCS)* 2022

*Complexity Network UK* 2022

## Monotone circuit lower bounds from robust sunflowers

*37th British Colloquium for Theoretical Computer Science (BCTCS)* 2021

*14th Latin American Theoretical Informatics Symposium (LATIN)* 2021

## LEADERSHIP AND SCIENTIFIC SERVICE

---

### Organisation of events:

- *Warwick-Imperial-Oxford Complexity Network*  
Online and Local Events. Running since December 2021
- Complexity Lunches at Warwick.

**Journal reviewing:** Journal of Graph Theory, Theory of Computing, Random Structures and Algorithms, ACM Transactions on Computation Theory

**Conference reviewing:** Computational Complexity Conference (CCC), Innovations in Theoretical Computer Science (ITCS), Symposium on Theory of Computing (STOC), IEEE Symposium on Foundations of Computer Science (FOCS)
